

NVM-2e

Voice Mail with Automated Attendant

Powerful Integrated Voice Mail for the Small Office/Home Office.

NVM-2e Voice Mail with Automated Attendant offers an expansive set of real integrated Voice Mail solutions for your Small Office/Home Office.

The NVM-2e is available in two models: with 2 voice mail ports and 3 hours of message storage or with 4 ports and 3 hours of storage. Both models have 66 mailboxes (one of which is dedicated to fax detection) and are wall mountable.

One-Touch Integration Convenience.

With the NVM-2e you'll get one-touch access to your most frequently used Integrated Voice Mail features. Use the Voice Mail features you need the most – like **Calling Your Mailbox** and **Leaving a Message** for a co-worker, just by pressing a single key. Use this same key to check your **Message Count Display** to see how many messages you have waiting in your mailbox. And, while you're on a call, a single touch can also **Transfer** your call directly to a co-worker's mailbox.

So your calls won't be missed, you can easily **Call Forward** your calls to your mailbox and set up a **Mailbox Greeting** for your callers. Have the built-in **Automated**

Attendant answer your company's calls. Once the Automated Attendant answers, a caller just dials the option or extension number they wish to reach.

Integration for the Way You Really Work.

If you can't be at your desk to take calls, press a key to have the NVM-2e automatically **Call Forward** your calls to your mailbox, or, your system may **Automatically Forward** your unanswered calls. When your mailbox answers, the caller hears your pre-recorded **Mailbox Greeting** and is asked to leave a message. You can record **MultipleGreetings** (up to 3) and easily select the one you want your callers to hear.

While you are busy at your desk, use the NVM-2e **Personal Answering Machine Emulation** to screen your calls just like your answering machine at home. Lift the handset to answer that important call and let the others go through to your mailbox.

NVM-2e — Voice Mail Value and Performance for the Small Office/Home Office.
